MyShield Next: Expanding the Range with Tailored Solutions

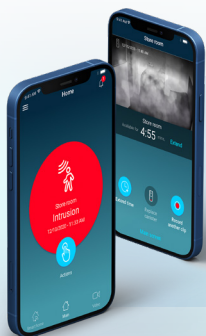

Building on the success of the original MyShield, MyShield Next is a cost-effective and versatile device designed to meet diverse security needs. MyShield Next offers superb installation flexibility and integrates effortlessly with any third-party alarm system or activation device. Like its predecessor, MyShield Next is easy to install, making it an excellent choice for a variety of scenarios where video verification is unnecessary or for extending smoke coverage.

Perfect for:

➤ Implementing together with existing security systems

➤ Extending smoke coverage in large spaces

➤ Immediate deployment in populated areas

Your Shield Against Intrusion

A dedicated mobile app offers the end-user or security personnel convenient remote monitoring capabilities, giving customers and service providers alike an ultimate security intervention experience.

MyShield Next

PIR motion detector

Smoke generator

MyShield Next IoT Cloud connected and integrated for extended smoke coverage

Designed for scenarios where visual verification isn't necessary, or where existing cameras already provide coverage, offering a cost-effective intrusion intervention solution for situations where a full all-in-one standalone device is not needed.

ADVANTAGES

- Effortless Integration
- Near-Zero Response Time
- Cost-Effective Solution
- Flexible and Easy installation

MyShield Next Wired An extra layer of security to your existing alarm. No SIM card needed!

This peripheral device seamlessly integrated through wired input into existing security monitoring systems, providing an added layer of active intrusion intervention.

Use cases

MyShield Next adapts seamlessly to various security needs, either as a secondary standalone device or integrated with existing systems.
